

Quick Start

by Eric Suen

1. Import the samples project to Eclipse

From the main workbench window, click **File > Import...**, The Import wizard opens, Choose "Existing Project to Workspace", click "next >" button. Select "org.sf.jeez.samples" folder and click "finish" button.

Note:

Currently, you can not create new report.

2. Import Existing JFreeReport file into workspace

From the main workbench window, click **File > Import...**, The Import wizard opens, Choose "Import for eReport", click "next >" button. Select the existing report you want to import, after importing, your report file extension will change from **".xml"** to **".xpt"**.

3. Design and Preview

When you double-click an existing eReport object in your project, or add a new report object to your project, the eReport Designer launches automatically.

4. Export the eReport to JFreeReport file format

From the main workbench window, click **File > Export...**, The Export wizard opens, Choose "Export eReport", click "next >" button. Select the existing file you want to export, you can export report files and other files at the same time, The only different is, for file extension with **".xpt"**, program will change the file extension to **".xml"**, and convert its file format to JFreeReport Extension format!
