

Welcome to eSuite

by Eric Suen

1. Introduction

The goals of eSuite is to provide a collection of plugins for Eclipse

The eSuite Project currently consists of the following projects:

- **eDataset**: Database design tools, currently is designed for Torque
- **eSQL**: Visual SQL Builder
- **eReport**: Visual Report Designer

2. Project Status

jeez project is started in June 2002. For some reasons , the project is inactivated for a long time. Now I continue to work on jeez, and changed its name from jeez to eSuite. The whole project is redesigned, and still in Planning.

Warning:

All the projects of eSuite are quite unstable, and lack most useful feature. It is not suitable for real product.
